geography lesson

The Classical philosophers were first to discover and unearth the ore. They chiseled its fine, colorless mineral from tawny-colored rock until the fall of the Roman Empire, after which the ore remained undisturbed underground for several hundred years.

Renaissance men, in the 14th and 15th centuries c.e., discovered remnants of the mines from which the ore was excavated in antiquity; these men unearthed the ore buried beneath the ruins of Classical civilization and eventually discovered several new deposits at sites across the planet, which they began to mine.

The thinkers of the Enlightenment traveled the world in search of all the formations from which the ore could be extracted, and mined it from caves and virgin territories in continent after continent.

Rationalists, classical liberals and humanists procured the land containing the ore, recruited laborers to the sites where the ore could be mined, and rallied those laborers to work purifying the ore from coarse alloys of superstition in furnaces of reason and objectivity

Until finally, after thousands of years of refinement, humanity beheld the unsullied, unadulterated substance of Truth®.
